PROFESSIONAL SUMMARY

Recent Computer Science graduate from the University of Auckland targeting graduate technology roles across software development, data/ML, quality engineering, and technical analyst pathways. Hands-on experience building full-stack web applications with Python, Flask, SQLAlchemy, JavaScript, and SQLite, with foundations in machine learning, image processing, data structures, REST APIs, automated testing, and Git-based collaboration.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, TypeScript, HTML, CSS, C#, C

Frameworks & Libraries: Astro, Flask, SQLAlchemy, Tailwind CSS, Leaflet.js, pytest

Data & ML: SQLite, Machine Learning Fundamentals, Classification, Model Evaluation, Image Processing

Tools & Practices: Sanity CMS, Render, Git, GitHub, Docker, REST APIs, AJAX, Agile Collaboration

Concepts: Data Structures & Algorithms, Object-Oriented Programming, Repository Pattern, Unit Testing, End-to-End Testing

Spoken Languages: English, Mandarin

EDUCATION

Bachelor of Science in Computer Science, University of Auckland

2023 - 2026

Relevant Coursework: Data Structures & Algorithms, Object-Oriented Software Development, Web Programming

Additional Learning: Machine Learning Fundamentals, Classification, Model Evaluation, Image Processing

PROJECTS

Human Nutrition Unit Website — Astro, TypeScript, Sanity CMS, Tailwind CSS, Render — Live Site

- Developed and deployed a client-facing website for a university Human Nutrition Unit as part of a 6-person capstone team working in weekly sprints.
- Built the About, Archived Studies, and selected Collaborations pages, integrating each with Sanity CMS for maintainable content management.
- Owned site-wide testing and supported production deployment through Render, helping ensure the completed website was reliable and ready for client use.

Recipe Web Application — Python, Flask, SQLAlchemy, SQLite, pytest — GitHub

- Built a full-stack recipe management application with authenticated accounts, recipe browsing, cascading search filters, favourites, reviews, and CRUD workflows.
- Designed a modular backend using the Repository pattern, service layer, and Flask Blueprints, enabling swappable in-memory and SQLite persistence with clearer testing boundaries.
- Implemented Health Star Rating calculation, pagination, and AJAX-powered interactions; wrote 25+ unit and end-to-end tests with pytest in a 3-person Agile/Git workflow.

Road Sign Detection System — Python, Machine Learning Fundamentals, Image Processing

- Built an automated image analysis pipeline to detect and classify road signs using image enhancement, filtering, bounding-box annotation, and classification concepts.
- Applied machine learning fundamentals around preprocessing, feature quality, model evaluation, and error analysis while documenting system design and testing methodology.

WORK EXPERIENCE

Stock Assistant, Woolworths

05/2023 – 06/2024

Beachlands, Auckland

- Maintained product availability and display standards in a fast-paced retail environment by coordinating daily restocking, deliveries, and inventory tasks.
- Collaborated with shift team members to meet operational targets while strengthening reliability, prioritization, and attention to detail.
